Admissions Committee International Master in Data Analytics

Universität Hildesheim

Universitätsplatz 1, 31141 Hildesheim, Germany

Subject: Motivation Letter for the International Master in Data Analytics

Dear Members of the Admissions Committee,

I would like you to know that I am very interested in the International Master in Data Analytics program in your institution, Universität Hildesheim. I have a strong foundation in computer science, with hands-on experience in conducting machine learning research, and an increasing interest in solving problems in a data-driven manner. I'm excited about continuing my academic journey here.

I recently completed my BSc. in Computer Science from BRAC University with a CGPA of 3.64/4.00. In my under-graduate years, I became more and more fascinated with the linkage between data and intelligent systems and their application to real-world tasks. I participated in courses like Artificial Intelligence, computer vision, numerical methods, and database systems and gained depth in analytical thinking and technical expertise, inspiring me to continue my studies in data analytics at a higher level.

My undergraduate thesis, "A 3D Convolutional Neural Network Architecture for Early Detection of Coronary Artery Blockage (Coronary-3D-UNet)", was one of the most impactful experiences of my academic career. In this research, we created a hybrid deep learning model for medical image segmentation based on a 3D CNN structure. In order to get a high-performance model, I also wanted to reduce the complexity of the model by adding in residual learning and attention mechanisms. Not only has this project deepened my knowledge of machine learning and medical imaging but has also allowed me to realize the potential of data analytics and AI in the healthcare domain and how this technology can positively impact society.

Outside of my thesis research, I took part in another couple of projects with machine learning in the healthcare arena: Predictive modeling for Alzheimer's disease, and Chest cancer detection using Python and Machine learning techniques. In order to further enhance the theoretical knowledge, I had done courses of Supervised Machine Learning and Advanced Learning algorithms from DeepLearning online.AI is a collaboration between Fine Arts and Stanford University. These experiences enabled me to have a solid foundation in technical and mathematical skills of data driven technologies.

In addition to research, I had the opportunity to acquire hands-on knowledge and experience of the industry as a full-stack web app developer. Balanced and developed responsive web platforms, worked with REST APIs, managed databases (MySQL and MongoDB) for academic and commercial projects. During my time at the Universal Institute for Advanced Studies as a Web Developer Intern and working at a chartered accounting firm, I learned about developing scalable solutions and user friendly software. This helped me develop my problem solving skills and gave me a way to see the technical knowledge become a viable solution for actual users.

What really interests me in the University of Hildesheim is that the Master in Data Analytics is interdisciplinary and application-oriented credited. A cross-disciplinary and application-oriented emphasis really interests me at the University of Hildesheim with their Master in Data Analytics. I have particular interest in the emphasis the program places on technologies that leverage machine learning and statistical analysis and use technologies related to big data. I feel that the curriculum is well suited for my long term vision of creating intelligent and scalable analytical systems, such as in the health care industry and other areas that have a larger impact. Furthermore, I am keen to attend school to learn from various viewpoints in an international academic environment, and work with students and scholars from a range of backgrounds.

I believe that the University of Hildesheim will offer me the perfect setting for my personal development, both in my academic studies and in my career. I look forward to bringing my technological background, research knowledge, and drive for the academic community to your team and continue to gain new knowledge in data analytics.

Many thanks for your interest in my application. Thank you for inviting me to join your program, I am excited to be a member!

Sincerely,

Ahanaf Abid Sazid
